

Copper Ridge Surgery Center Announces SAVI SCOUT® Surgical Guidance System

April 1, 2021, Traverse City, MI – Copper Ridge Surgery Center has recently acquired the SAVI SCOUT® surgical guidance system.

The SAVI SCOUT® is a patient-focused breast tumor localization solution. The SAVI SCOUT® surgical guidance system is an innovative technology that allows breast cancer surgeons to pinpoint lesions more accurately before surgery. The sophisticated technology helps surgeons with tumor localization, surgical planning, and surgical guidance.

For women diagnosed with early-stage breast cancer, the SAVI SCOUT® system is a zero-radiation, wire-free solution for localization and guiding tumor removal during lumpectomy and excisional biopsy procedures.

“SAVI SCOUT® is an advanced technology that allows for wireless localization of lesions in the breast and allows for precise removal of all the targeted tissue. It allows for less time in the Surgery Center on the day of the surgery and decreases waiting time for the patient,” states Ashley Sachtleben, D.O.

Dr. Sachtleben is a graduate of Michigan State University College of Osteopathic Medicine and completed her residency at St. John Macomb-Oakland Hospital. Dr. Sachtleben is a general surgeon with surgical privileges at Copper Ridge Surgery Center and Munson Medical Center.
